Subject: for considering response and state WQ program

Deliberative Process/Ex. 5

Can you please provide corresponding human risk and aquatic life risk criteria to correspond to the contaminants listed in sampling results? Also, can you please provide some characterization of dangers, or lack thereof posed by the levels indicated in the results?

Without those details it is difficult to interpret what the EPA is saying, and the information in raw form would appear to serve little purpose.

This is something that you should do on an ongoing basis.

The Associated Press also has a number of outstanding questions that have been pending forest of the week that have not been answered. Please provide answers to those questions in a timely manner.

Thanks for your time and help,

Matt Brown
